1. This action is in response to the application that was received on February 24, 2004. Claims 1-10 are pending.
2. The drawings received on February 24, 2004 have been approved by the examiner.
3. The following is an examiner's statement of reasons for allowance:

The cited references describe timing systems that include both watchdog type timers that are normally reset before they count to completion and counters that normally count to completion and generate an output signal such as an interrupt signal. Documents 6,996,732 and 2004/0122565 describe timing systems that have both watchdog and sleep timers. However, the watchdog timer and the sleep timer use separate counters. Documents 6,732,287 and 6,385,637 describe timing systems that have a single timer/counter that drives several general comparing means. The cited documents do not teach or suggest the claimed invention as recited in independent claim 1.

The claimed invention is allowable over the art of record because the art of record does not teach or suggest a microcomputer comprising the interrelated combination of elements including a CPU, a watch dog timer, a sleep timer, a common counter, a supervisory time register, a recovery time register, a supervisory comparing means and a recovery comparing means as claimed in independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
